

Second Deliverable

Monday, December 14, 2020

Ajay Kumar

I think, you can move forward with this idea.

12:44 PM

Arooj Ahmed Qureshi Sunday, December 13, 2020 8:06 PM

- change of objective function: which I already did for you. Replacing the error function by the AUC score.
- changing S-shaped function: The report I shared with you has a proposed list of S-functions.
- converting Jaya algorithm output into binary conversion : if we change this mechanism, along with the above two, it might be a good package overall.

Parameters

- **Objective Function**
 - AUC score
 - Error Function
- **S-shaped Function** [added now]
 - 7 functions added in the report [pages 5-7]
- **Binary Conversion** [page 7]
 - Random_r [report_1 method]
 - Default_r [new method]

Algorithm

Previous Report

Algorithm: The pseudo-code of the Proposed Algorithm

```
1. ----- Initialize parameters and content -----
2. Initialize Jaya algorithm parameters. Population Size (P), Number of Executions (E), Maximum
   Iterations (MaxIter), Minimum number of Features (D).
3. Load Datasets Train (Tr), Test (Te)
4. Initialize content. Objective Function, S-Function, Classifier
5. ----- Initialize the binary population -----
6. Generate binary population  $X_{(i,j)} \quad \forall p = 1, 2, \dots, P$  and  $\forall d = 1, 2, \dots, D$  features.
7. Calculate  $f(X)$ 
8. ----- Execution of Jaya Algorithm -----
9. For  $a = 1, 2, \dots, E$  do
10.   For  $m = 1, 2, \dots, MaxIter$  do
11.     if  $P > 1$  do
12.       Determine the best solution in the population ( $X_{best}$ )
13.       Determine the worst solution in the population ( $X_{worst}$ )
14.       For  $p = 1, 2, \dots, P$  do
15.         For  $d = 1, 2, \dots, D$  do
16.            $r1 = rand(0,1)$ 
17.            $r2 = rand(0,1)$ 
18.            $Jaya(p, d) = x(p, d) + r1 \times (bestX - |x(p, d)|) - r2(worseX - |x(p, d)|)$ 
19.           ----- binary conversion using S-Function -----
20.            $B(X_{new}(p, d)) = \frac{1}{1 + \exp^{(-5 \times X_{new}(p, d) - 0.25)}}$ 
21.         End for
22.         Calculate  $f'(X_{new}(p, d))$ 
23.       End for
24.       ----- population update -----
25.       If  $f'(X_{new})) > f(X)$  do
26.          $f(X) = f'(X_{new})$  // update objective function
27.       Else remove  $X(p, d)$  // remove population
28.        $P = len(X)$  // update P
29.     Else STOP for // for m
30.   End for
31. End for
32. ----- Optimal Subset of Features -----
33. Re-arrange Train and Test datasets according to optimal features
34. Classify
```
